Application Instructions for Specialty Crops

MultiFIX™

The Optimum Food for Microbes

- **Good** : Apply 5 Gallons of MultiFIX™ per acre per crop season
- **Better**: Apply 10 Gallons of MultiFIX™ per acre per crop season
- **Best**: Apply 15 Gallons of MultiFIX™ per acre per crop season

Easy to Apply!

- Mix with many herbicides in the same tank applications
- Apply in water run- flood, drip or any type of irrigation
- Add to liquid fertilizer (broadcast, berm and foliar)

When to apply per acre

Double dose on first application. Apply ¼ of annual dosage at the following times:

- – To help soil structure and roots.
- – Apply ¼ of annual dosage to help bloom duration
- – Apply ¼ of annual dosage to help plant maturity and size
- – Apply ¼ of annual dosage to build up microbes in the soil for next season

Benefits of MultiFIX

MultiFIX causes a cooperative effect in the soil to feed the microbes in the soil, which help release fertilizers and nutrients into the plants. In effect, the soil is rejuvenated and the moisture holding ability is improved. Your plants will produce better quality crops. Plants will also be healthier and have more vigorous growth. Plants, with higher yield, have more profit potential!
