New Trees

MultiFIX[®] - The Optimum Food for Microbes

Application Guide 1 - 3 gallons per acre every season

Rates based on crop economics - 15 gallons per season on strawberries to 1 quart on most row crops.

Reasonable expectation for income **increases of 4% to 12% using MultiFIX[®].**

Application Rates:

- **Good** – Apply 1 Gallon of MultiFIX[®] per crop season – Expected 4-8% increase.
- **Better** – Apply 2 Gallons of MultiFIX[®] per crop season – Expected 8-12% increase.
- **Best** – Apply 3 gallons of MultiFIX[®] per crop season – Expected 12-15% increase.

Application (Beginning Treatment)

1. Add MultiFIX[®] 2 to 4 ounces plus water to tree in a root spray or soil root zone
2. Tank in the MultiFIX[®] with ½ gallon to 5 gallons of water per tree in soil backfill
3. Apply MultiFIX[®] with water at base or drip line of each tree

Application Timing at 1 to 3 quarts per application per acre - Double first application

- **Pre-bloom** - helps bloom duration and fruit set.
- **Post fruit set** - helps leaf formation and size – more photosynthesis energy.
- **Mid-Point between fruit set and expected harvest** - helps fruit maturity and size.

Post-harvest - helps tree recover from harvest stress – microbes also work all winter
